T
his year APPA conducted the 11th annual Thought Leaders symposium, which focused on the topic of Remaking the Facilities Organization. Why this topic, and why now? First and foremost, the current state of higher education is increasingly unsustainable. Although this is not necessarily new news, the driving forces impacting society, higher education, and the facilities profession have become more untenable than ever before. Although this set of driving forces are familiar, collectively they underpin the necessity for change, for disruptive innovation . . . and NOW!

The overall environment lacks resources, is increasingly competitive, pressured to recruit and retain students (and faculty), and the public perception of high-cost tuition, low efficiency, and weak job market, is pervasive. Our institutional systems & operations are inefficient, bureaucratic, increasingly burdened by regulations, with poor communication channels. Our customer base is growing with changing expectations from shifting demographics and 24/7 demands, to a public face painted by an explosive use of social media.

Unfortunately, our employee base is diminishing, with an aging workforce, changing demographics across four generations, lacking accountability, exhibiting low trust and low morale. Finally, the built environment reflects an aging infrastructure with increasing capital renewal/deferred maintenance, increased demand for sustainability, need for updated building design, and flexibility of buildings. An unfortunate depiction of our times, but nonetheless the reality we face!

Therefore, the facilities organization must respond to this changed environment with strategies, implementation plans, and new practices that better position the organization and the institution for success. In response and by way of this topic, we chose to develop a vision of the service organization of the future, the associated organizational structures and culture required, how people will need to change and/or the necessary employee investments, and addressed the demographic pressures and strategies for change to occur successfully.

CRITICAL TOPICS
As a framework for the Thought Leaders monograph, due to be published in September, we fleshed out two major topics: 1) “Creating the Customer-Centric Facilities Organization” that drives customer loyalty, and 2) “Creating a New Facilities Team/Workforce” that positively and productively drives employee engagement. Both considered
critical in “remaking the facilities organization.” We recognized that we can learn about great customer service from other industries. In addition, we looked at transforming the facilities organization from the perspective of APPA’s four core competencies (General Administration & Finance; Operations & Maintenance; Energy & Utilities; Planning, Design, & Construction). Finally, we identified the benefits of this change to the institution and the facilities organization.

With respect to the customer-centric model, we found that the worst customer service experiences lack a customer service culture, are ineffective in their communications, with rigid, inflexible policies, and lack empathy, compassion, or concern for the customer. However, the best customer service experiences have three common threads: 1) an organizational culture and leadership that prioritize customer service; 2) policies, systems, structures, and processes that promote customer service; and 3) employees that demonstrate key traits (behaviors and attitude) “behind” great customer service.

To expand further on what comprises excellent customer service organizations, the essential characteristics within the three common threads are:

- **Organizational culture and leadership prioritize customer service**
  - Where that customer service culture starts at the top
  - Extensive communication across the entirety of the organization of the value of customer service
  - Mission and vision consistently aligns with excellent customer service
  - Resources are available to support customer service
  - The organization knows who their customers are, what they need/want

- **The structures, policies, and processes of the organization promote customer service**
  - Workforce training and development is optimized
  - Customer feedback mechanisms are in tune with customer experiences
  - Employee empowerment and initiative is rewarded
  - Policies are transparent in their application

- **Employees demonstrate key behaviors and traits**

---

**WE’LL GROW YOUR TREES WHILE YOU GROW YOUR BUSINESS.**

We’re Bartlett Tree Experts, a 100+ year old tree and shrub care company with global reach and local roots. We provide expert, attentive service, a safety-first record, and a wide spectrum of services, including:

- Tree & Shrub Pruning
- Cabling & Bracing
- Fertilization & Soil Care
- Insect & Disease Management
- Inventory & Management Plans

Call 877.BARTLETT (877.227.8538) or visit BARTLETT.COM
“behind” great customer service such as:
- Ownership
- Initiative
- Mission and stewardship
- Empathy

Furthermore, in sessions given by subject matter experts from the hospitality industry, we gleaned the following lessons:
- Fine-tune workforce development to promote customer service.
- Monitor and reward customer service excellence at every level of the organization.
- Know your customers and pay attention when their needs/expectations change.
- Empower employees to make decisions and take initiative.
- Identify and use service standards to track and improve customer experiences.
- Make smart use of social media to listen to customers and be at the ready to respond.

Creating a customer-centric culture provides a framework for driving change in facilities organizations bringing about such opportunities as:
- Aligning institutional mission
- Understanding who the customers are, their needs and expectations
- Understanding what services are provided and how to connect to customer needs
- Analyzing how best to provide services
- Assessing quality of service delivery through feedback mechanisms
- Organizing systems, structures, and processes to replicate great customer service and achieve customer loyalty
- Empowering staff to take ownership and think creatively
- Promoting stewardship of campus resources
- Considering disruptive innovation as a tool to promote change

Certainly there are clear benefits to the institution and organization. A few representative ones follow:
- Strategic plan alignment
- Improved stakeholder experience
- Reduced risk with greater business continuity
- Compliance/sustainability goals
- Better community partner
- Lower operational costs
- Improved morale
- Improved reputation
- Employer of choice thereby attracting great talent
- Enhanced predictability and improved benchmarking
- Shift from being reactive to proactive, leading to less disruptions

For sure, this summary represents just a taste of what the full monograph will cover in much greater detail. We invite you to visit the website in early September for a downloadable PDF of the entire monograph. The content will also be available in print in the next two issues of the Facilities Manager magazine (September/October and November/December 2016).
